

## City of Austin Water Conservation Programs Approved Irrigation Controllers

Approved controllers **must** be installed with a rain shut-off device. They must be equipped with battery back-up, day-specific scheduling, minute to minute station runtimes, multiple start times, and multiple programs. They must have a day indicator for what day the system will run and what day it is in the cycle.

### **Irritrol/Toro**

Rain Dial

Total Control

Custom Command

Smart Dial (*weather-based*)

Intelli-Sense (*weather-based*)

### **Hunter**

Pro-C

ICC

### **Rainbird**

ESP series

Class E Series

### **Other**

ETWater Smart Controller (*weather-based*)

WeatherTRAK (*weather-based*)

Weathermatic SL1600 (*weather-based*)

Although controllers available at home improvement stores may have the required qualifications such as specific-day programming etc., we do not recommend these controllers as we find them difficult to operate.
